## INTRODUCTION

Nuclear Power Reactors in the World is an annual publication that presents the most recent data pertaining to nuclear power reactor units in IAEA Member States.

This forty-fourth edition of Reference Data Series No. 2 (RDS-2) provides a detailed comparison of various statistics up to and including 31 December 2023. The tables and figures contain the following information:

- General statistics on nuclear reactors in IAEA Member States;
- Technical data on specific reactors that are either planned, under construction or operational, or that have been shut down or decommissioned;
- Performance data on reactors operating in IAEA Member States, as reported to the IAEA.

The data compiled in this publication are a product of the IAEA's Power Reactor Information System (PRIS). The PRIS database is a comprehensive source of data on all nuclear power reactors in the world. It includes specification and performance history data on operational reactors as well as reactors under construction or in the decommissioning process. Data are collected by the IAEA via officially nominated national liaison officers and data providers in Member States. The IAEA appreciates the valuable assistance of the national authorities, official correspondents and various utilities in gathering the information for this report.

As of the end of December 2023, the global operational nuclear power capacity was 371.5 GW(e), provided by 413 reactors in 31 Member States. Additionally, 21.3 GW(e) from 25 reactors, licensed for operation, remained in suspended operations throughout 2023. This includes four reactors in India with a combined net capacity of 639 MW(e) and 21 reactors in Japan with a combined net capacity of 20,633 MW(e). Japan restarted two reactors in 2023, Takahama-1 and Takahama-2, which had been in suspended operation since 2011.

Nuclear power capacity has remained at a consistent level over the past decade, with an additional 69.8 GW(e) nuclear capacity connected to the grid since the beginning of

2013. Over 79% of this capacity growth occurred in Asia, where a total capacity of 55.4 GW(e) (54 reactors) was connected to the grid over the same period. China leads the region's growth, adding 40.02 GW(e) of new capacity to the grid since the beginning of 2013.

Throughout 2023, there were 418 operational reactors with a total capacity of 377.6 GW(e). However, only 403 of these reactors, with a combined capacity of 364.5 GW(e), reported their electricity production to the Agency. The total reported production was 2552.07 TWh, representing a slight 2.6% increase from 2022.<sup>1</sup> The top three producers of nuclear electricity in 2023 were the United States, China and France. The United States, with the largest nuclear fleet in the world, accounted for 31% of the total nuclear electricity generation, producing 779.2 TWh. China followed with 16% (406.5 TWh), continuing to surpass France in nuclear electricity generation for the fourth consecutive year. France produced 323.8 TWh, contributing 13% to the global total.

In 2023, 45 nuclear power reactors across 10 Member States supplied 2046.0 GWh of electrical equivalent of heat for non-electric applications. The majority of this heat (88%) was utilized for district heating, totalling 1799.1 GWh, in Bulgaria, the Czech Republic, China, Hungary, Russia, Romania, Slovakia and Switzerland. Industrial heating in India and Switzerland was supported by 211.8 GWh (10%) of electrical equivalent of heat, while 35.1 GWh (2%) was used for desalination.

In 2023, five pressurized water reactors (PWRs) with a total capacity of 5 GW(e) were connected to the grid in five different Member States. In China, Fangchenggang-3 was connected to the grid on 10 January, which is the first of two Hualong One (HPR1000) demonstration reactors being constructed at the Fangchenggang site. In Slovakia, the Mochovce-3 reactor, a water-water energetic reactor (VVER) V-213 model with a net electric capacity of 440 MW(e), was connected to the grid on 31 January. In the United States of America, the Vogtle-3 AP1000 reactor (1117 MW(e)) connected to the grid on 31 March. In Belarus, Belarusian-2 reactor model VVER V-491 (1110 MW(e)) connected to the grid on 13 May. And, on 21 December, Shin-Hanul-2 (1340 MW(e)) APR-1400

---

<sup>1</sup> The total electricity production does not include Ukrainian reactor units, as operational data were not submitted for the year 2023 by the time of publication.

reactor in Republic of Korea, connected to the grid. All these reactors, except Mochovce-3 and Shin-Hanul-2, started commercial operations during 2023.

At the end of 2023, a total capacity of 61.1 GW(e) (59 reactors) was under construction in 17 countries. During the year, construction began on six PWR nuclear power reactors in China and Egypt with total capacity of 6.8 GW(e). China continued to lead the world's nuclear power expansion by starting the construction of five reactors. These include four CAP1000 reactors: Haiyang-4 (1161 MW(e)), Lianjiang-1 (1224 MW(e)), Sanmen-4 (1163 MW(e)), and Xudapu-1 (1000 MW(e)). Additionally, construction began on one HPR1000 reactor, Lufeng-6 (1116 MW(e)). On 3 May, the first concrete was poured into the foundation, marking the start of the main construction phase for Unit 3 (a 1100 MW(e) VVER-1200 reactor) of the El Dabaa nuclear power plant project in Egypt.

At the end of 2023, the 69 years of worldwide cumulative operating experience amounted to over 19 751 reactor-years, from 647 reactors with a total capacity of 497.9 GW(e) across 35 countries. About 67% of global operational reactor capacity (261.8 GW(e), 295 reactors) has been in operation for over 30 years, while over 29% (112.2 GW(e), 142 reactors) has been in operation for over 40 years and 4% (17.5 GW(e), 28 reactors) for over 50 years.

Even as the fleet ages, operational nuclear power reactors continue to demonstrate high levels of overall reliability and performance. Load factor, also referred to as capacity factor, is the actual energy output of a reactor divided by the energy output that would be produced if it operated at its reference unit power for the entire year. A high load factor indicates good operational performance. In 2023, the global median capacity factor was 88.0%. Boiling water reactors (BWR) and pressurized water reactors (PWR) have been the best performing reactors since 2013, with median capacity factors of 89.3% and 82.7% respectively.

Throughout 2023, 6 GW(e) of nuclear capacity (five reactors) were permanently taken offline. In Belgium, after over 40 years of operation, Tihange-2 (PWR, 1008 MW(e)) was permanently shut down on 1 February. This was followed by the shutdown of Kuosheng-2 (BWR, 985 MW(e)) in Taiwan, China, on 14 March. Germany's last three operational reactors – Emsland (PWR, 1335 MW(e)), Isar-2 (PWR, 1410 MW(e)), and

Neckarwestheim-2 (PWR, 1310 MW(e)) – were shut down on 15 April, twelve years after the country implemented its nuclear power phaseout policy.

Information and data received by the IAEA through 21 June 2024 are included in this publication. Any modifications received at a later date, although not included in this publication, are available in the PRIS database.

PRIS statistics are available in the IAEA's annual publications such as "Operating Experience with Nuclear Power Stations in Member States" and "Country Nuclear Power Profiles", as well as on the PRIS web page (<http://www.iaea.org/pris>). Detailed nuclear power reactor data and reports are accessible to registered users through the PRIS Statistics on-line application. Enquiries should be addressed to:

## DEFINITIONS

### Performance factors

$$\text{EAF (\%)} = \frac{(\text{REG} - \text{PEL} - \text{UEL} - \text{XEL})}{\text{REG}} \times 100$$

$$\text{UCF (\%)} = \frac{(\text{REG} - \text{PEL} - \text{UEL})}{\text{REG}} \times 100$$

$$\text{UCL (\%)} = \frac{\text{UEL}}{\text{REG}} \times 100$$

$$\text{PCL (\%)} = \frac{\text{PEL}}{\text{REG}} \times 100$$

$$\text{LF (\%)} = \frac{\text{EG}}{\text{REG}} \times 100$$

$$\text{OF (\%)} = \frac{\text{On-line hours}}{\text{Total hours}} \times 100$$

where

EAF is the energy availability factor, expressed in per cent;

UCF is the unit capability factor, expressed in per cent;

UCL is the unplanned capability loss factor, expressed in per cent;

PCL is the planned capability loss factor, expressed in per cent;

LF is the load factor, expressed in per cent; and

OF is the operating factor, expressed in per cent.

REG Reference energy generation: The net electrical energy ( $\text{MW}\cdot\text{h}$ ) supplied by a unit continuously operated at the reference unit power for the duration of the entire reference period.

PEL	Planned energy loss: The energy (MW·h) that was not supplied during the period because of planned shutdowns or load reductions due to causes under plant management control. Energy losses are considered to be planned if they are scheduled at least four weeks in advance.
UEL	Unplanned energy loss: The energy (MW·h) that was not supplied during the period because of unplanned shutdowns, outage extensions or load reductions due to causes under plant management control. Energy losses are considered to be unplanned if they are not scheduled at least four weeks in advance.
XEL	External energy loss: The energy (MW·h) that was not supplied owing to constraints beyond plant management control that reduced plant availability.
EG	Electrical energy: The net electrical energy supplied during the reference period as measured at the unit outlet terminals after deducting the electrical energy taken by unit auxiliaries and the losses in transformers that are considered to be integral parts of the unit.

### **Planned reactors**

The IAEA considers a reactor to be planned from the date when a construction licence application has been submitted to the relevant national regulatory authorities until the construction start date.

### **Construction start**

The date when the first major placing of concrete, usually for the base mat of the reactor building, is carried out.

### **First criticality**

The date when the reactor is made critical for the first time.

### **Grid connection**

The date when the plant is first connected to the electrical grid for the supply of power. After this date, the plant is considered operational.

## **Commercial operation**

The date when the plant is handed over by the contractors to the owner and declared officially in commercial operation.

## **Suspended operation**

A unit is considered in the suspended operations status if it has been shut down for an extended period (usually more than one year) and there is an intention to re-start the unit but:

1. restart is not being aggressively pursued (there is no vigorous onsite activity to restart the unit) or
2. no firm restart date or recovery schedule was established when the unit was shutdown.

Suspended operations may be due to due to technical, economic, strategic or political reasons. This status does not apply to long-term maintenance outages, including unit refurbishment, if the outage schedule is consistently followed, or to long-term outages due to regulatory restrictions (license suspension), if a restart (license recovery) term and conditions have been established. Such units are still considered "operational" (in a long-term outage). If an intention not to restart the shutdown unit has been officially announced by the owner, the unit is considered "permanently shutdown".

## **Permanent shutdown**

The date when the plant is officially declared by the owner to be shut down and taken out of operation permanently.

## **NSSS supplier**

The supplier of a power reactor unit's nuclear steam supply system.

## **Units and energy conversion**

1 terawatt hour (TW·h) =  $10^6$  megawatt hours (MW·h)

For an average power plant:

1 TW·h               =     equivalent to 0.39 megatonnes of coal (input);  
                          =     equivalent to 0.23 megatonnes of oil (input).

<b>TOTAL</b>	<b>413</b>	<b>371539</b>	<b>25</b>	<b>21272</b>	<b>59</b>	<b>61091</b>	<b>2545.5</b>	

Notes:

1. The totals include the following data from Taiwan, China:
  - 2 units, 1874 MW(e) in operation;
  - 2 TWh of nuclear electricity generation, representing 6.9% of the total electricity generated there.
2. The total electricity production does not include Ukrainian reactor units as operational data was not submitted for the year 2023 by the time of publication.
3. The total electricity production excludes output from reactors that were permanently shut down in 2023.

1. The total includes the following data from Taiwan, China:
  - operational reactors, 2 units, 1874 MW(e); permanently shutdown reactors, 4 units, 3178 MW(e); 241 years, 11 months.
2. Operating experience is counted from the grid connection excluding any suspended operations period.

Notes:

1. The column Non-Electric Applications (NEA) indicates the use of the facility to provide: DH district heating, DS desalination, PH process heating.
2. The EAFF and UCF calculated for Ukrainian reactor units are from 2012-2021 as operational data were not submitted for 2022 and 2023.

## TABLE 17. REACTORS IN DECOMMISSIONING PROCESS OR DECOMMISSIONED, 31 DEC. 2023 — continued

Table 17: Definitions for reactors in decommissioning process or decommissioned

Shutdown reason	Description	Decom. strategy	Description
1 Obsolescent technology or major technology failure or deterioration		ID	Immediate dismantling and removal of all radioactive material
2 Political decision		DD+SE	Deferred dismantling, placing all radiological areas into safe enclosure
3 Economic case no longer viable		DD+D+SE	A combination of immediate and deferred dismantling
4 Licence not granted for continued operation		ISD	In situ disposal, involving encapsulation of radioactive materials and subsequent restriction of access
5 Accident		Other	None of the above
6 After major component failure			
7 Other technological reasons			
8 Other economical reasons			
10 Licence terminated - legal act at the end of the decommissioning process (and site released for restricted/unrestricted use)			
Other	None of the above		
Fuel Management	Description	Current decom. phase	Description
1 Transfer for Storage at reactor facility (AR Pool)		1	1. Drawing up the Final Decommissioning Plan
3 Transfer for storage in away from reactor facility (AFR-RS) on reactor site - Dry Storage Technology		2	2. Transition phase following permanent shutdown, including reactor core defuelling (See also Fuel Management) and strategy/preparation
4 Transfer for storage in away from reactor facility (AFR-OS) off reactor site - Dry Storage Technology		3	2.1. Core defueling
5 Shipment to a reprocessing plant		4	2.2. Preparation for Safe Enclosure
8 Pre-disposal activities (Encapsulation)		5	2.3. Preparation for dismantling of major equipment and buildings
9 Transfer for storage in away from reactor facility (AFR-RS) on reactor site - Wet Storage Technology		6	2.4. Partial dismantling of peripheral structures or buildings in advance of the main plant deferred dismantling
10 Transfer for storage in away from reactor facility (AFR-OS) off reactor site - Wet Storage Technology		7	3. Safe enclosure period
		8	3.1. Active safe enclosure period
		9	3.2. Passive safe enclosure period
		10	4. Dismantling of major plant and buildings
		11	5. Preparation for site release, including final survey
		12	6. Licence terminated - legal act at the end of the decommissioning process (and site released for restricted/unrestricted use)
		13	7. Demolition (if disconnected from nuclear dismantling) / conventional demolition
		14	8. Waste conditioning on-site - only for decommissioning waste
		15	9. Waste shipment off-site - only for decommissioning waste

**TABLE 18. PERFORMANCE FACTORS BY REACTOR CATEGORY (2021-2023)**

Reactor Category	Number of Units	Availability Factor (EAf) %	Reactors reporting to IAEA PRIS (see note)			Operating Factor (OF) %	Load Factor (LF) %
			Planned Cap-Loss Factor (PCL) %	Capacity Factor (UCF) %	Forced Loss Rate (FLR) %		
PWR	310	81.2	12.5	82.7	3.4	83.1	80.6
PWR < 600 MWe	39	88.3	9.4	89.4	0.9	88.1	86.5
PWR >= 600 MWe	271	80.8	12.7	82.3	3.6	82.3	80.2
BWR	44	92.2	6.1	92.6	1.3	92.6	91.3
BWR < 600 MWe	0						
BWR >= 600 MWe	44	92.2	6.1	92.6	1.3	92.6	91.3

IZ	IZHORSKIYE ZAVODY			4	

**TABLE 25. NSSS SUPPLIERS: ABBREVIATIONS AND SUMMARY — continued**

Supplier Code	Type	Under Construction	Operational	Suspended Operation	Shutdown
JSC ASE	JSC "ATOMSTROYEXPORT"	10	3		
KEPCO	KOREA ELECTRIC POWER CORPORATION	1	3		
KWU	KRAFTWERK UNION, AG	1	3		18
LEVIER					2
MAEC-KAZ	MAEC-KAZATOMPROM LIMITED LIABILITY PARTNERSHIP «MANGISTAU ATOMIC ENERGY COMPLEX- KAZATOMPROM»				1
MAEP	MINATOMENERGOFROM, MINISTRY OF NUCLEAR POWER AND INDUSTRY	2			2
MHI	mitsubishi heavy industries, ltd.	11	4		5
MSM	MINISTRY OF MEDIUM MACHINE BUILDING OF THE USSR (MINSREDMASH)				5
NA	NA	1			
NGA	NATIONALE GESELLSCHAFT ZUR FÖRDERUNG DER INDUSTRIELEN ATOMTECHNIK				1
NNC	NATIONAL NUCLEAR CORPORATION		2		
NPC	NUCLEAR POWER CO., LTD.		6		
NPCIL	NUCLEAR POWER CORPORATION OF INDIA, LTD. VIRRAM SARABHAI BHAVAN, ANUSHAHTI NAGAR, MUMBAI - 400 094.	3	16		
NPIC	NUCLEAR POWER INSTITUTE OF CHINA		8		
OH/AECL	ONTARIO HYDRO / ATOMIC ENERGY OF CANADA, LTD.		18		2
ORANO	ORANO	2	2		
PAA	PRODUCTION AMALGAMATION 'ATOMMASH', VOLGORODNSK		4		
PAIP	PRODUCTION AMALGAMATION 'ZHORSKY PLANT ATOMMASH', VOLGORODNSK, RUSSIA		11		
PPC	PWR POWER PROJECTS, LTD.		1		
RDM	ROTTERDAMSE DROOGDOK MAATSCHAPPIJ (RDM) IN ROTTERDAM (NL)				1
Russian	RUSSIAN HYDRAULIC PRESS DESIGN INSTITUTE (OKB)	1			
SKWU	SIEMENS KRAFTWERK UNION, AG.		1		
SACM	SCIEETE ALSACIENNE DE CONSTRUCTIONS MECANIQUES				2
SENPE	SHANGHAI ELECTRIC NUCLEAR POWER EQUIPMENT CO., LTD	1			
Shanghai	SHANGHAI NUCLEAR ENGINEERING RESEARCH & DESIGN INSTITUTE CO., LTD.	2			
SHE	SHANGHAI ELECTRIC	2			

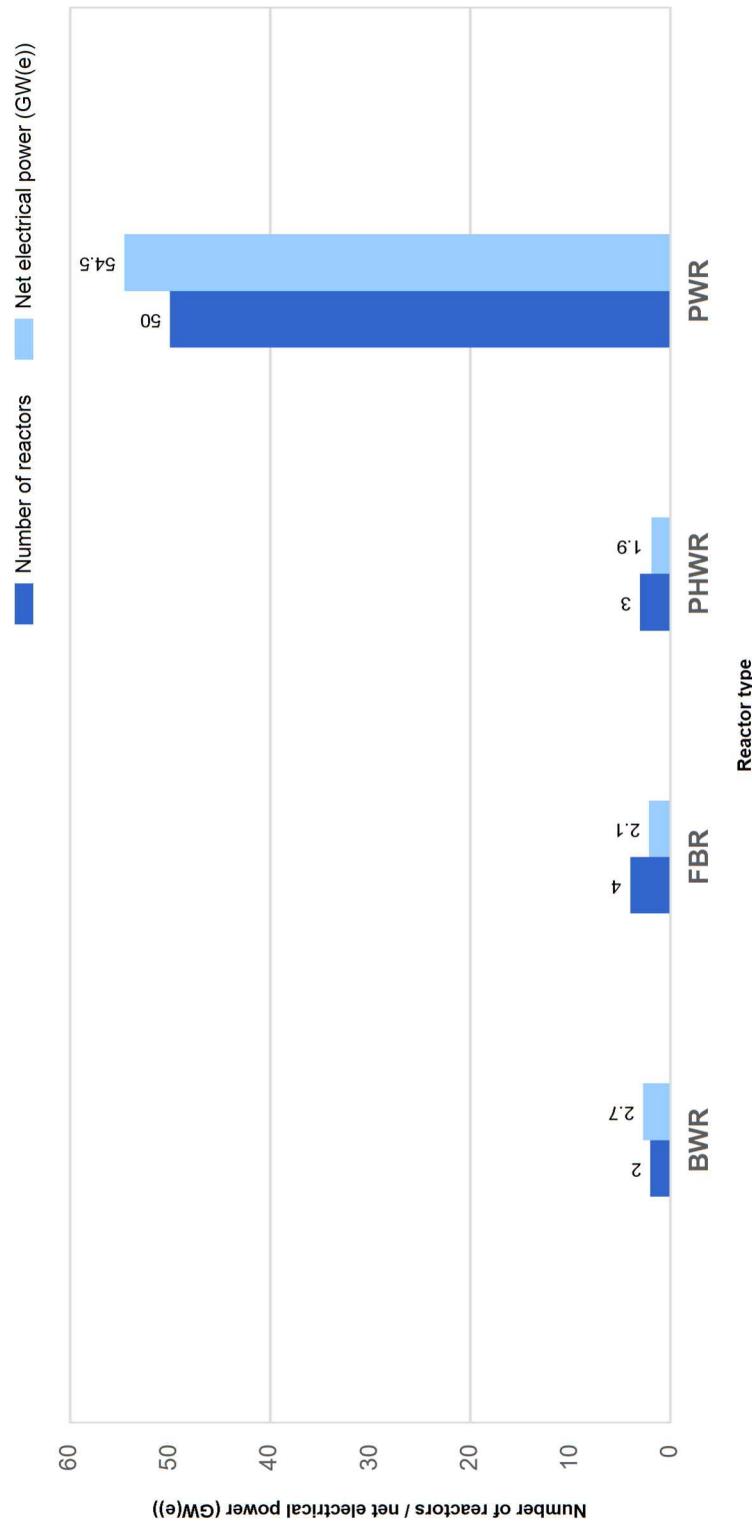

**TABLE 25. NSSS SUPPLIERS: ABBREVIATIONS AND SUMMARY — continued**

Supplier Code	Type	Under Construction	Operational	Suspended Operation	Shutdown
SIEM_KWU	SIEMENS AG, KRAFTWERK UNION AG				1
SIEMENS	SIEMENS AG, POWER GENERATION				1
SKODA	SKODA CONCERN NUCLEAR POWER PLANT WORKS				1
SNERDI	SHANGHAI NUCLEAR ENGINEERING RESEARCH AND DESIGN INSTITUTE CO. LTD	1	2		
SNPEMC	SHANGHAI NUCLEAR POWER EQUIPMENT MANUFACTURING CO. LTD	2			
T/H/F/M	TOSHIBA / HITACHI / FUJI ELECTRIC HOLDINGS / MITSUBISHI HEAVY INDUSTRIES	1			1
TNPG	THE NUCLEAR POWER GROUP, LTD.				14
TOSHIBA	TOSHIBA CORPORATION			10	7
TSINGHUA	TSINGHUA UNIVERSITY		1		
UEC	UNITED ENGINEERS AND CONTRACTORS				1
UKAEA	UNITED KINGDOM ATOMIC ENERGY AUTHORITY				10
WH	WESTINGHOUSE ELECTRIC CORPORATION	1	67		18
WH/MHI	WESTINGHOUSE ELECTRIC CORPORATION / MITSUBISHI HEAVY INDUSTRIES, LTD.	3			
Not specified	OTHERS	1

## ORDERING LOCALLY

IAEA priced publications may be purchased from our lead distributor or from major local booksellers.

Orders for unpriced publications should be made directly to the IAEA.

### Orders for priced publications

Please contact your preferred local supplier, or our lead distributor:

#### **Eurospan**

1 Bedford Row  
London WC1R 4BU  
United Kingdom

#### **Trade orders and enquiries:**

Tel: +44 (0)1235 465576  
Email: [trade.orders@marston.co.uk](mailto:trade.orders@marston.co.uk)

#### **Individual orders:**

Tel: +44 (0)1235 465577  
Email: [direct.orders@marston.co.uk](mailto:direct.orders@marston.co.uk)  
[www.eurospanbookstore.com/iaea](http://www.eurospanbookstore.com/iaea)

#### **For further information:**

Tel. +44 (0) 207 240 0856  
Email: [info@eurospan.co.uk](mailto:info@eurospan.co.uk)  
[www.eurospan.co.uk](http://www.eurospan.co.uk)

### **Orders for both priced and unpriced publications may be addressed directly to**

This is the 44th edition of Reference Data Series No. 2, which presents the most recent reactor data available to the IAEA. It contains summarized information as of the end of 2023 on power reactors operating, under construction and shut down as well as performance data on reactors operating in the IAEA Member States. The information is collected through designated national correspondents in the Member States and the data are used to maintain the IAEA's Power Reactor Information System (PRIS).
